FIA 8863 Racing Nets Installation Specification

Dear Sir or Madam,

We would like to inform you of the Racing Nets Installation Specification which can be found on the FIA website at the following link (http://www.fia.com/sites/default/files/racing_nets_installation_specification_v5.pdf).

Racing nets are a low-cost, effective solution to protect drivers in closed cars from basilar skull fractures during violent lateral and angled lateral impacts. They are designed to provide a lateral restraint for the seat and driver during lateral and angled lateral impacts. In order for the racing nets to be more effective, it is important that they be properly installed.

FIA-approved racing nets are compulsory for cars in WTCC (Super 2000 Circuit cars only), GT3, LMGTE and LMGTE AM events as from 2016.

We remain at your disposal for any further information you may require.

Yours faithfully,

Nuno Costa
