

## Stand 21

Founded over 40 years ago by Yves Morizot in Dijon, France, Stand 21 is now the world leader in head to toe made-to-measure personal racing equipment. Stand 21 products are designed, engineered and hand crafted by 150 employees in our own facilities, following the most stringent safety and medical standards.

By attending more than 300 races a year in 30 different countries, Stand 21 makes itself available to personally assist its customers wherever they need it the most. All Stand 21 products are FIA, SFI or SNELL certified, and have earned the well-deserved reputation of being of the finest quality. Stand 21 is also the largest Hans device manufacturer world-wide and has a unique and exclusive range to fit any driver at any budget.

Safety is not solely Stand 21's business; it is also a passion that has led to the creation of the Stand 21 Safety Foundation. Acting under the name "Racing Goes Safer," ([www.racinggoessafer.com](http://www.racinggoessafer.com)) the Stand 21 Safety Foundation is a non-profit organisation with its primary purpose of promoting enhanced motorsports safety. It achieves this goal in collaboration with medical and scientific bodies, as well as with major series organizers (FIA, SFI, NHRA, SCTA, SCCA, SCORE), with whom safety-related seminars and lectures are presented by high-profile experts and specialists in order to bring awareness of safety issues and solutions to the forefront of the motorsport community worldwide.
