**Cold Pressure Cooling Curve**

\[
P_{\text{front}} = (T - 70) \cdot 0.116 + P_{\text{startr}}
\]

\[
P_{\text{rear}} = (T - 70) \cdot 0.106 + P_{\text{startr}}
\]

\[
P_{\text{startr}}: \text{Minimum starting pressure on the front axle [psi]}
\]

\[
P_{\text{startr}}: \text{Minimum starting pressure on the rear axle [psi]}
\]

\[
T: \text{Tyre temperature [°C]}
\]

---

**Maximum heating times and temperatures (tread & sidewall)**

- Temperatures refer to tyre tread and side wall temperatures, not blanket or controller set-point temperatures.
- Tyres may only be heated prior to the session in which they are intended to be used.
- The temperatures apply at all times during the event.

---

**Tyres notes**

- Not permitted to switch tyres from their originally allocated position.
- Do not subject tyres to large deformation or heavy impact.
- Do not leave fitted tyres exposed at an air temperature lower than 15°C and/or any UV emission.
- Revised prescriptions could be issued during the race weekend in accordance with TD003.
- Heating time temperature limits apply to the actual tyre surface temperature measured with the IR gun as detailed in the TD003.
- Cold cooling curve temperature limits apply to the tyre side wall temperature measured with the probe as detailed in TD003.
- BLANKET HEATING TIME for each temperature range to be counted from the moment the blanket control unit is set to reach its targeted temperature within its correspondent interval.

---

**General notes**

Teams are kindly reminded that the following will be subject to FIA checks during the event:

- Starting pressures
- Cold pressures (according to the cold pressure cooling curves)
- Re-heat pressures
- EOS Camber
- Maximum tyre temperatures in blankets
- Tyre swapping
