Network configuration:

In order to make the cameras feed going to the scrutineering, each team must provide for each camera:

- 1 switch: MikroTik CSS610-8P-2S+in
- 1 SFP module MikroTik compatible: CONBIC® S-31DLC20D-C – 1000Base-LX DDM SFP, 10km – 100%MikroTik Compatible
- 1 OS2 SC/APC to LC/UPC optic fiber garber (minimum 5 meters length): Elfcam® - Câble à Fibre Optique (Jarretière Optique) OS2 Monomode Duplex SC/APC à LC/UPC
- 2 SC/APC adapter (female/female): Cerrxian SC Adaptateur Fibre Optique monomode SC Femelle vers SC Femelle APC

Teams are invited to own some spare parts.

The following configuration for connection is requested:
Any decision taken by the WEC Committee is not subject to appeal.

http://fiawec.alkamelsystems.com/committe.php

Materials configuration:

- **Switch MikroTik:**
  - the switch must be setup as UNMANAGEABLE.

- **Camera:**
  - each camera must be properly and individually setup with a specific login and password:
    - An “administrator” account must be setup
    - A password for this account must be created and communicated to the Technical Delegates
    - The Technical Delegates will then own the “administrator” account (by changing the password)
    - The Technical Delegates will then create a “viewer” account for each camera (credentials will be communicated to each camera owner)
  - a specific IP address for each camera, switch and computer will be communicated (specifically to each Team) prior the first event by the Technical Delegates
  - each camera must be firstly setup and **named** as follow: “Car race number” _”Team name”

**Specificity of the 24H of Le Mans event:**

Due to the network infrastructure available in the pit building, we will ask you for a different and simpler cabling regarding the Pit lane video cameras setup compared to the other rounds of the WEC.

You will have to connect your cameras in each box on the ethernet socket labeled “SPARE”. For computers allowing you to watch your own cameras, you must connect it to the network socket labeled “IP PHONE”.

**It is strictly prohibited to connect a network switch to these two network sockets.**

If you have several garages, the “IP Phone” socket will also allow you to access all of your cameras without having to deploy a surveillance computer for each camera.

Please read below the wiring diagram to be implemented, as well as photos of the network boxes and the distribution of the sockets that you will have to use:
